

CCS 249 Final Project Grading Rubrics

Class and Section: _____

Date: _____

Group Members: _____

Trait	Exceptional	Acceptable	Amateur	Unsatisfactory	Score
<i>Project Scope & Purpose (20%)</i>	18-20 points - Clearly defines the problem, objectives, and target users. - Justifies why NLP is the appropriate approach. - Provides real-world relevance or application.	14-17 points: - Defines the problem well but lacks depth in justification. - Addresses user needs but lacks specific real-world impact.	10-13 points: - Problem statement is vague or incomplete. - Unclear why NLP is used.	0-9 points: - No clear problem definition. - No connection to NLP concepts.	
<i>Data Collection and Preprocessing (20%)</i>	18-20 points: - Uses a relevant dataset (real-world or simulated). - Effectively performs cleaning, tokenization, stopword removal, stemming, lemmatization, etc. - Handles missing or noisy data appropriately.	14-17 points: - Uses a reasonable dataset but lacks justification. - Performs most preprocessing steps but may miss some optimizations.	10-13 points: - Uses an inappropriate or small dataset. - Missing key preprocessing steps.	0-9 points: - No preprocessing or poorly handled data. - Dataset is irrelevant or incorrectly labeled.	
<i>Model Selection and Implementation (25%)</i>	23-25 points: - Selects an appropriate model, which were discussed. - Explains model choice based on data characteristics. - Implements efficiently with optimized hyperparameters.	19-22 points: - Uses a good model but lacks justification. - Basic hyperparameter tuning attempted.	14-18 points: - Uses a model but without clear justification. - Implementation has inefficiencies or errors.	0-13 points: - Incorrect or ineffective model choice. - Implementation is incomplete or does not work.	
	18-20 points: - Uses	14-17 points: - Uses relevant	10-13 points: - Uses some	0-9 points: - Does not	

<i>Evaluation & Performance Metrics (20%)</i>	appropriate metrics (accuracy, precision, recall, F1-score, BLEU, perplexity, etc.). - Compares results with baseline models. - Provides insightful analysis of errors and limitations.	metrics but lacks detailed explanation. - Basic comparison to baseline models.	evaluation metrics but misses key aspects. - No comparison to baseline models.	evaluate the system properly. - No meaningful discussion of results.	
<i>Documentation and Presentation (15%)</i>	13-15 points - Demonstrates deep understanding of NLP concepts. - The team presented their documentation on the scheduled date. - The team presented a demonstration of the fully functioning systems application with little to no errors.	10-12 points - The team presented their documentation on the scheduled date. - Presentation covers the project but misses technical depth. - Documentation exists but lacks details.	7-8 points - The team presented a minimal documentation on the scheduled date. - The team presented a demonstration of the developed systems with errors.	0-6 Points - The team failed to present their developed system. - The team failed to submit the project on time.
